Pons, 2008-03-17 A wearable robot is a mechatronic system that is designed around the shape and function of the human body with segments and joints corresponding to those of the person it is externally coupled with Teleoperation and power amplification were the first applications but after recent technological advances the range of application fields has widened Increasing recognition from the scientific community means that this technology is now employed in telemanipulation man amplification neuromotor control research and rehabilitation and to assist with impaired human motor control Logical in structure and original in its global orientation this volume gives a full overview of wearable robotics providing the reader with a complete understanding

of the key applications and technologies suitable for its development. The main topics are demonstrated through two detailed case studies: one on a lower limb active orthosis for a human leg and one on a wearable robot that suppresses upper limb tremor. These examples highlight the difficulties and potentialities in this area of technology, illustrating how design decisions should be made based on these. As well as discussing the cognitive interaction between human and robot, this comprehensive text also covers the mechanics of the wearable robot and its biomechanical interaction with the user, including state-of-the-art technologies that enable sensory and motor interaction between human biological and wearable artificial mechatronic systems, the basis for bioinspiration and biomimeticism, general rules for the development of biologically inspired designs, and how these could serve recursively as biological models to explain biological systems. The study on the development of networks for wearable robotics, Wearable Robotics Biomechatronic Exoskeletons, will appeal to lecturers, senior undergraduate students, postgraduates, and other researchers of medical, electrical, and bioengineering who are interested in the area of assistive robotics. Active system developers in this sector of the engineering industry will also find it an informative and welcome resource.
