Frontiers in Statistical Quality Control 8 Hans-Joachim Lenz, Peter-Theodor Wilrich, 2006-08-08 In Canada acceptance sampling has been used in legal metrology applications for nearly four decades One of its principal uses has been in the quality control of utility meters that measure electricity or natural gas supplied to consumers By law such meters must be inspected for conformance to specification requirements prior to use and be periodically inspected while in use With few exceptions due to the numerous utility companies in the country and their varied practices the meters exist in the form of isolated lots for inspection purposes The proportion of nonconforming meters in a lot has traditionally defined lot quality for utility meter sampling inspection purposes Another principal application of acceptance sampling has been in the quality control of the net contents of packaged products sold in the marketplace Such products include those sold on the basis of such measures as weight volume length and area In this particular application products are also usually inspected on an isolated lot basis for regulatory purposes However lot quality is usually measured on the basis of two criteria for such products the proportion of nonconforming packages in the lot and the lot mean quantity This section reviews Canadian quality

control practices in these two areas of application highlighting some of the deficiencies and issues Three class s pling plans are proposed as a possible solution to some of these deficiencies and issues
