Frontiers Of Illusion Science Technology And The Politics Of Progress:

Frontiers Of Illusion Daniel Sarewitz, 2010-06-10 An incisive argument for fostering stronger links between the interests of society and progress in science *Science, Technology, and Democracy* Daniel Lee Kleinman, 2000-09-28 Activists scientists and scholars in the social sciences and humanities explore in productive dialogue what it means to democratize science and technology The contributors consider what role lay people can have in a realm traditionally restricted to experts and examine the socio economic and ideological barriers to creating a science oriented more toward human needs Included are several case studies of efforts to expand the role of citizens including discussions of AIDS treatment activism technology consensus conferences in Europe and the United States the regulation of nuclear materials processing and disposal and farmer networks in sustainable agriculture and examinations of how the Enlightenment premises of modern science constrain its field of vision Other chapters suggest how citizens can interpret differing opinions within the scientific communities on issues of clear public relevance *Risk, Language, and Power* Jeffery T. Morris, 2012-02-09 *Risk Language and Power* explores discourse around the environmental risks of nanotechnology making the case that the dominance in risk discourse of regulatory science is a limiting policy debate on environmental risks and that specific initiatives should be undertaken to broaden debate not just on nanotechnology but generally on the risks of new technologies Morris argues that the treatment of environmental risk in public policy debates has failed for industrial chemicals is failing for nanotechnology and most certainly will fail for synthetic biology and other new technologies unless we change how we describe the impacts to people and other living things from the development and deployment of technology However Morris also contends that the nanotechnology case provides reason for optimism that risk can be given different and better treatment in environmental policy debates *Risk Language and Power* proposes specific policy initiatives to advance a richer discourse around the environmental implications of emerging technologies Morris believes that evidence of enriched environmental policy debates would be a decentering of language concerning risk by developing within discourse language and practice directed toward enriching the human and environmental condition ***Science, Technology, and Society*** Sal P. Restivo, 2005 Emphasizing an interdisciplinary and international coverage of the functions and effects of science and technology in society and culture *Science Technology and Society B* contains over 130 A to Z signed articles written by major scholars and experts from academic and scientific institutions and institutes worldwide Each article is accompanied by a selected bibliography Other features include extensive cross referencing throughout a directory of contributors and an extensive topical index *Science, Technology, and Society* Sal Restivo, 2005-05-19 Emphasizing an interdisciplinary and international coverage of the functions and effects of science and technology in society and culture *Science Technology and Society* contains over 130 A to Z signed articles written by major scholars and experts from academic and scientific institutions and institutes worldwide Each article is accompanied by a selected bibliography Other

Leadership in Science and Technology: A Reference Handbook William Sims Bainbridge, 2011-10-20 Tackling 100 key topics and providing case studies in the area of science and technology leadership this reference handbook is an essential resource for students in this area The ABC's of Science, Technology & Innovation (STI) Policy Joseph P. Lane, 2023-07-28 Innovation is a widely applied yet poorly understood term in the context of public policies and practices among Western nations Technological innovations specifically have and will continue to advance civilization shape modern society and drive the economic health and geo political standing of nations This book offers a unique interpretation of science technology innovation STI policies in Western nations particularly in regard to government sponsored programs The author challenges established thinking directly addressing numerous myths that cloud our understanding of innovation and proposes a fresh perspective grounded in fundamental logic and analysis Written in short chapters and presented in an alphabetically organized framework this book addresses what is working and what isn't working in current STI policies and suggests that the most efficient and effective way to generate technological innovations that yield the desired socio economic benefits is for national governments to sponsor directed scientific research and directed engineering development and align both with the requirements of carefully managed commercial production The book also features examples drawn from government data scholarly literature practitioner anecdotes and the author's personal experience **Forum for Applied Research and Public Policy**, 1997 **Frontiers**, 2008 A journal of women studies *Science, Technology & Society*, 2000 Science, Technology and Society, 2000 **Proceedings** Geoscience Information Society, 2000 **American Book Publishing Record**, 1996-05 Futures the journal of forecasting, planning, and policy, 1998 **Comprehensive Potato Biotechnology** S. M. Paul Khurana, Ramesh Chandra, Mahesh D. Upadhyaya, 1998 Potato is a crop grown worldwide which is being increasingly studied particularly from the aspects of biotechnology covered here The enormous research data in the field of potato biotechnology for crop improvement form *The Blackwell Encyclopedia of Sociology: Q-SE* George Ritzer, 2007 Design Issues, 2009 Shadows of Cavernous Shades Erik Persson, 2002 **Development Narratives** Gerard D. Middendorf, 2002 This dissertation proposes a critical analysis of three major theoretical approaches to explaining development material determinist social realist and discursive Adherents to each of these approaches look either primarily to the material e.g. nature geography technology the social e.g. social structure power or the discursive e.g. rhetorical strategies dominant discourse as primary determinants of development outcomes Yet development processes are simultaneously material social and narrated while not reducible to any one of these dimensions The crisis in the critical stance argues Latour 1993 lies in its theoretical difficulty in weaving these three into a single coherent narrative This thesis is grounded in a case study of the shaping of development policies in Panama I examine the actors human and material the language the policy documents the negotiations and actions that have shaped agricultural research policy in Panama from the 1950s to the

present The study draws on more than forty in depth interviews with key actors as well as extensive archival and current policy documentation Actor network theory is suggested as one way to move towards less partial narratives In particular it is argued that agricultural development in Panama can be understood as an outcome of negotiations among diverse actors as they attempt to extend their networks They do so by strategically enrolling things e g documents and new crop varieties people e g producers and spokespersons for the development financiers and rhetoric in order to advance their interests Implications of the actor network approach for development studies are discussed
