Fiction Refracts Science Modernist Writers From Proust To Borges:

Fiction Refracts Science Allen Thiher, 2005 Examines the relationship between science and the fiction developed by modernists including Musil Proust Kafka and Joyce Looks at Pascalian and Newtonian cosmology Darwinism epistemology relativity theory quantum mechanics the development of modernist and postmodern fiction positivism and finally works by Woolf Faulkner and Borges Provided by publisher Microscopy, Magnification and Modernist Fiction Patrick Armstrong, 2024-12-26 Exploring how modernism registered shock experiences of the microscopic and extended vision in prose fiction through the work of four modernist writers D H Lawrence Marcel Proust Virginia Woolf and Samuel Beckett this book is the first substantial study of the interrelations between microscopy and modernist fiction Illustrating ways in which optical instruments had the capacity to change displace and reframe ideas of what the world is like this book argues that encounters with the microscopic are often depicted as thresholds between the human and the non human in ways that reverberate through modernist fiction Exploring a period of significant developments in microscopical tools and techniques from the light microscope to the electron microscope this book traces a shift that reconfigured the limits of the observable

Fiction Refracts Science Allen Thiher, 2005 Allen Thiher demonstrates that major modernists were not only concerned with the sciences but they also were influenced by them He argues that there are direct relations between science and the formal shape of fiction developed by some of the most important modernists **Latin American Cyberculture and Cyberliterature** Claire Taylor, Thea Pitman, 2007-12-01 This collection of critical essays investigates an emergent and increasingly important field of cultural production in Latin America cyberliterature and cyberculture in their varying manifestations including blogs and hypertext narratives collective novels and e mags digital art and short Net films Highly innovative in its conception this book provides the first sustained academic focus on this area of cultural production and investigates the ways in which cyberliterature and cyberculture in the broadest sense are providing new configurations of subjects narrative voices and even political agency for Latin Americans The volume is divided into two main sections The first comprises eight chapters on the broad area of cyberculture and identity formation preservation including the development of different types of cybercommunities in Latin America While many of the chapters applaud the creative potential of these new virtual communities identities and cultural products to create networks across boundaries and offer new contestatory strategies they also consider whether such phenomena may risk reinforcing existing social inequalities or perpetuate conservatism The second section comprises six chapters and an afterword that deal with the nature of cyberliterature in all its many forms from the cyber cultural legacies of writers such as Julio Cortázar and Jorge Luis Borges to traditional print literature from the region that reflects on the subject of new technology to weblogs and hypertext and hypermedia fiction proper **Franz Kafka's the Metamorphosis** Sterling Professor of Humanities Harold Bloom, 2009 Presents a collection of critical essays about Kafka's *The metamorphosis* **Borders, Bodies and Narratives of Crisis in Europe** Thanasis

Lagios,Vasia Lekka,Grigoris Panoutsopoulos,2018-04-25 This book addresses two interrelated discourses of crisis in contemporary Europe the migrant crisis vs the economic crisis The chapters shed light on the thread that links these two issues by first examining immigration and the transformations regarding its control and administration via border technologies as well as on the centrality of the body as a means and carrier of border within contemporary biopolitical societies In a second step the authors proceed to a genealogy of the current discourses regarding the financial and political crisis through a Foucauldian and Lacanian perspective focusing on the co articulation of scientific knowledge and biopolitical power in Western societies **Latin American and Iberian Perspectives on Literature and Medicine** Patricia

Novillo-Corvalán,2015-06-05 This is the first study to examine the representation of illness disability and cultural pathologies in modern and contemporary Iberian and Latin American literature Innovative and interdisciplinary the collection situates medicine as an important and largely overlooked discourse in these literatures while also considering the social political religious symbolic and metaphysical dimensions underpinning illness Investigating how Hispanic and Lusophone writers have reflected on the personal and cultural effects of illness it raises central questions about how medical discourses cultural pathologies and the art of healing in general are represented Essays pay particular attention to the ways in which these interdisciplinary dialogues chart new directions in the study of Hispanic and Lusophone cultures and emerging disciplines such as the medical humanities Addressing a wide range of themes and subjects including bioethics neuroscience psychosurgery medical technologies Darwinian evolution indigenous herbal medicine the rising genre of the pathography and the illness as metaphor trope the collection engages with the discourses of cultural studies gender studies disability studies comparative literature and the medical humanities This book enriches and stimulates scholarship in these areas by showing how much we still have to gain from interdisciplinary studies working at the intersections between the humanities and the sciences *Revolutionary Experiments* Nikolai Krementsov,2013-12-04 Who are we Where did we come from and where are

we going What is the meaning of life and death Can we abolish death and live forever These big questions of human nature and human destiny have boggled humanity's best minds for centuries But they assumed a particular urgency and saliency in 1920s Russia just as the country was emerging from nearly a decade of continuous warfare political turmoil persistent famine and deadly epidemics generating an enormous variety of fantastic social scientific and literary experiments that sought to answer these perpetual existential questions This book investigates the interplay between actual scientific and fictional literary experiments that manipulated sex gonads in animals and humans searched for rays of life froze and thawed butterflies and bats kept alive severed dog heads and produced various tissue extracts hormones all fostering a powerful image of science that conquers death *Revolutionary Experiments* explores the intersection between social and scientific revolutions documenting the rapid growth of science's funding institutions personnel public resonance and cultural authority in the aftermath of the 1917 Bolshevik Revolution It examines why and how biomedical sciences came to occupy such a

prominent place in the stories of numerous litterateurs and in the culture and society of post revolutionary Russia more generally Nikolai Krementsov argues that the collective though not necessarily coordinated efforts of scientists their Bolshevik patrons and their literary fans critics effectively transformed specialized knowledge generated by experimental biomedical research into an influential cultural resource that facilitated the establishment of large specialized institutions inspired numerous science fiction stories displaced religious beliefs and gave the millennia old dream of immortality new forms and new meanings in Bolshevik Russia

Au Seuil de la Modernité Nigel Harkness, Marion Schmid, 2011 This volume of essays which is dedicated to the late Richard Bales one of the doyens of Proust studies considers Proust's pivotal role at the threshold of modernity between nineteenth and twentieth century forms of writing and thinking between the Belle Epoque and the First World War between tradition and innovation More than just a temporal concept this threshold is theorized in the volume as a liminal space where borders geographical artistic personal dissolve where greater possibilities for artistic dialogue emerge and where unexpected encounters between artists genres and disciplines take place Working both backwards and forwards from the publication dates of *A la recherche du temps perdu* 1913-27 the seventeen essays written specially for this volume take as their focus Proust's manifold engagements with the world of modernity as well as intermedial relations among the generations of artists before and immediately after him Looking back to the nineteenth century the undisputed starting point for nascent forms of modernity in Western art and literature and a period that was uniquely formative for the young Proust they also offer insights into inter artistic dialogue in Surrealist and post Surrealist painting and poetry

Choice, 2006 *Annual Bibliography of English Language and Literature* Modern Humanities Research Association, 2005 Includes both books and articles *The British National Bibliography* Arthur James Wells, 2006 *Book Review Index*, 2006 Every 3rd issue is a quarterly cumulation *Новая литература по социальным и гуманитарным наукам*, 2008 602. gece Murat Gülsoy, 2009 ***Bibliographie d'histoire littéraire française*** Otto Klapp, 1960 ***Fiction Rivals Science*** Allen Thiher, 2001 In *Fiction Rivals Science* Allen Thiher describes the epistemic rivalry that the major nineteenth century French novelists felt in dealing with science After brief considerations of Stendhal Thiher focuses on the four most important realist novelists in France Balzac Flaubert Zola and going into the twentieth century Proust According to Thiher each of these novelists considered himself to be in competition with science to make the novel an instrument for knowledge The first chapter sets forth the understanding of science that dominated the early nineteenth century in order to make it plausible that literary minds throughout the nineteenth century thought that they could not only rival science but even make positive contributions to knowledge The Newtonian paradigm that had dominated the Enlightenment was slowly being challenged by new developments both in physics and in nonphysical sciences such as biology Especially in biology the development of a scientific discourse using narrative temporality favored the idea that novelists could also use fiction to construct discourses that advanced knowledge Balzac wanted to construct a natural history

of society and correct the chemical theory of his time Flaubert drew upon medicine and physiology for the rhetoric of his realist fiction Zola used unsuccessful medical paradigms for his doctrine of heredity and models drawn from thermodynamics to describe the relation of the individual to societal forces Finally Proust drew upon thinkers such as Poincaré to elaborate an epistemology that put an end to the rivalry novelists might feel with scientists Proust located certain knowledge within the realm of human subjectivity while granting the power of laws to rule over the contingent realm of physical reality in which after Poincaré neither mathematics nor Newton was any longer a source of absolute certainty Proust's novel is thus the last great realist work of the nineteenth century and the first modernist work of consciousness taking itself as the object of knowledge By demonstrating that the great French realist novelists dealt with many of the same problems as did the scientists of the nineteenth century *Fiction Rivals Science* attempts to show how culture unites literary and scientific inquiry into knowledge Providing a new interpretation of the development of literary realism this important new work will be welcomed not only by literary scholars but by historians of science and culture as well
