The COVID-19 pandemic has forced online learning to be a “new normal” during the past three years, which highly emphasizes students’ improved digital literacy. This study aims to present a literature review of students’ digital literacy. Grounded on about twenty journal articles and other related publications from the Web of Science Core Collection, this paper focused on the definition of digital literacy; the factors affecting students’ digital literacy (age, gender, family socioeconomic status, and parent’s education level); the relationship between students’ digital literacy and their self-control, technostress, and engagement; and the three approaches to gauge the level of students’ digital literacy. The study also provided some advice for educators and policymakers. Finally, the limitations and implications were presented.

1. Introduction

As a result of the COVID-19 pandemic, many sectors have been terribly affected, including the education sector. Plenty of students had to leave their school and stay at home. The educational sectors turned to online education immediately to fight against the pandemic crisis [1]. Online learning is a mixture possessing both benefits and challenges.

On the contrary, it enjoys many benefits. First and foremost, it is flexible and time-saving [2]. It simplifies learning methods compared to traditional approaches and allows people to stay at home and get access to knowledge. Moreover, it is effective since students can repeatedly listen to the recorded sessions to help themselves have a good grasp of the knowledge [3]. In addition, online learning also enjoys several characteristics like easy accessibility and flexibility, which enables the students in rural or remote areas to study and allows students to plan their time to complete their courses available online [4].

On the contrary, it also has some challenges. Some students are less satisfied with their courses since they could not get enough feedback and valuable comments [5]. In addition, students could not be fully engaged in the class as a result of the lack of human interaction [6, 7]. Compared with

face-to-face learning, students regard online learning as less interesting, and they are less motivated in the learning process [8]. Moreover, some teachers are not that proficient in manipulating the digital application, leading to that both teachers and students cannot have a good experience [9].

A study illustrated that from the online learners’ perspective, there were five aspects to be improved: teamwork, cognitive, operating, organizing, and emotional [10]. From these five aspects, a potential impact on developing students’ learning outcomes may be digital literacy. The students have not fully prepared for the abrupt switch to online learning. With different levels of digital literacy, they may have various perceptions of online learning.

Recently, many studies have been done to investigate students’ digital literacy through quantitative methods [11–15], but a few studies have made a comprehensive review of the literature related to students’ digital literacy. In this way, readers can have a comprehensive understanding of digital literacy over two decades. In addition, some advice is provided for educators and policymakers. In this study, the author intends to give a literature review of digital literacy over two decades and make references for educators and policymakers. This paper is presented as follows: Section 2 outlines the materials and methods used in this study.

David Gabbard, 2008 The second edition of Knowledge and Power in the Global Economy examines how neoliberal and
neoconservative policies are working in tandem to privatize and commercialize public schools It looks at how these policies
and the agendas behind them have impacted the internal dynamics of school management teaching and learning as well as
how they have transformed the external dynamics of education from a public good or service offered to serve public interests
to a private enterprise primarily serving private interests In addition to information critique and analysis multiple
perspectives are provided that readers can draw upon to formulate an alternative vision of education as a crucial element of
social change along democratic and egalitarian lines The first edition of this volume provided a critical encyclopedic
approach to the rhetoric of educational reform as it developed from the 1980s through the 1990s critiquing its vocabulary
elaborating the multiplicity of ways that the logic of neoliberalism and the emerging patterns of high stakes testing and
accountability were impacting the curriculum and introducing ideas associated with alternative and liberatory educational
projects Since its publication in 2000 policy developments such as the No Child Left Behind Act of 2001 in the U S and others
in the U K and other parts of the world have nationalized and intensified these patterns deepening the logic and extent of
neoliberalism s hold over educational reforms At the same time it is impossible to understand the current crises in education
solely in terms of neoliberalism the impact of neoconservatism must also be considered Hence this second edition has a new
subtitle The Effects of School Reform in a Neoliberal Neoconservative Age This edition is structured around five themes
