Topic	Key Messages	Key Concepts
<b>Overview</b>	Substitution and drug substitution is a situation that occurs when someone has been prescribed a drug, but someone else has substituted it with another drug. This is often done to avoid a problem with the original drug, such as a side effect or a shortage. Substitution can be done in a number of ways, including over-the-counter substitution, prescription substitution, and generic substitution.	Substitution is not a simple act. There are many factors that can lead to substitution, including a change in the drug's formulation, a change in the drug's manufacturer, or a change in the drug's name. Substitution can also be done to avoid a problem with the original drug, such as a side effect or a shortage. Substitution can be done in a number of ways, including over-the-counter substitution, prescription substitution, and generic substitution.
<b>Substitution and Biology</b>	Drug substitution and substitution are biologically based. The body's ability to absorb and metabolize drugs is affected by a number of factors, including the drug's chemical structure, the drug's route of administration, and the individual's genetics.
